

# VAC MASTER DRUM VAC 205E

## ELECTRIC & PNEUMATIC

Vac Master Drum Vac is designed to provide efficient industrial bulk material collection straight into a 205 Litre drum. The machine will handle most types of dry materials with ease. Connect into a 240 volt 10 amp power source to collect bulk quantities of either wet (when ordered with water level float shut down) or dry materials.

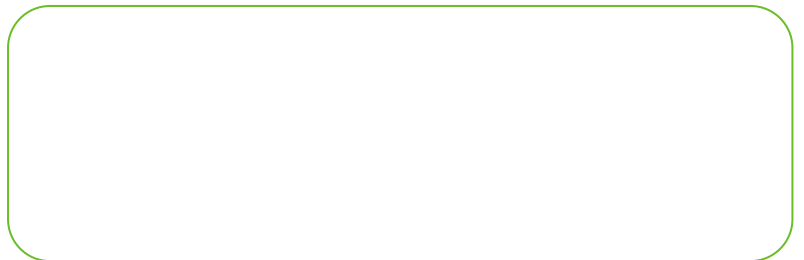

Designed to allow the operator to quickly switch the suction head to alternate 205 Litre drums, giving unlimited collection capacity and higher productivity. Standard dual stage filters with filter protectors provide powerful vacuuming performance.

The optional HEPA filtration is rated at a 99% efficiency at 0.3 microns and allows for asbestos, lead or other sensitive material clean up.

Pneumatic models are available for combustible material vacuuming.

# Wet/Dry Vacuuming made *easy*

## Features

- 240 volt 10 amp electric model
- 211 CFM 6.0 " Hg electric model
- 70 CFM @ 65 PSI air required pneumatic model
- 110 CFM 12" Hg air flow pneumatic model
- Durable powder coat finish
- 5 metres 51 mm vacuum hose
- Floor wand for dry and wet materials
- Optional HEPA Filter
- Optional water shut off system
- Optional 205 Litre drum
- Optional drum dolly with castors

## Typical Uses

- Most industry vacuuming
- Concrete dust collection
- General building site vacuuming
- Cleaning wood dust
- Plastic products & regrind
- Plastic fibres
- Liquid vacuuming (Electric model only)
- Powder coating
- Panel repair shops
- General plant cleaning
